Alma Platinum IV UBS Multi Strategy Alternatives

Fund Assets under Management: € 274,809,910

Investment Strategy

Alma Platinum IV UBS Multi Strategy Alternatives ("the Fund") is a "multi-manager" fund, meaning that Alma Capital Investment Management (Investment Manager) appoints a number of sub-investment managers to each manage a segment of the assets of the Fund (Segment). UBS Hedge Fund Solutions LLC (Investment Adviser) advises the Management Company on selection of sub-investment managers and allocation of Fund to each Segment from time to time. The sub-investment managers will invest in a wide range of investments, using a variety of investment strategies and techniques. Among these may be i) "equity hedge" strategies, where the Fund will invest in shares of companies but use financial contracts (derivatives) to try to limit the effect of negative market movements; ii) "relative value" strategies, where the Fund will invest in across a variety of assets but will try to take advantage of mis-pricing and other opportunities to gain a return; iii) "trading strategies" where the Fund will invest in a broad range of assets (share in companies, foreign exchange, tradable debt issues by companies and governments, currencies) where a sub-investment manager believes that it can achieve a return; and iv) "credit/income" strategies where the Fund will invest in debt investments. The Investment Manager may also invest up to 10% of the assets of the fund in other collective investment schemes.

Performance History (28.08.2019 - 30.06.2020) ⁽¹⁾

Data is not shown as there is less than 12 months of performance data available.

Monthly Return Last 12 Months ⁽¹⁾

Data is not shown as there is less than 12 months of performance data available.

Key Benefits

- Access a diversified fund of hedge funds portfolio selected by a dedicated investment team
- Benefit from the hedge fund value proposition, namely taking advantage of investment opportunities while controlling downside risk
- Benefit from the high levels of transparency that is required by the regulator
- Benefit from the fund's daily liquidity

Key Risks

- Unlike traditional investments, hedge funds do not primarily aim to attain exposure in specific markets or investment instruments. They differ in their more frequent use of derivative instruments and in trying to leverage their return by borrowing funds, using derivatives and taking up short positions on securities. As a result, they have potential risks in addition to the market, credit and liquidity risks associated with traditional investments. This requires corresponding risk tolerance and capacity. Investors should also be aware that these funds offer no capital preservation guarantee. All investments are subject to market fluctuations. Every fund has specific risks, which can significantly increase under unusual market conditions.

(4) Source: Alma Capital. Exposure by region is calculated on a delta adjusted basis and is determined by the country where the issuer of the security generates a majority of its revenue, where this information is available. Regional exposures reflect the equity, credit and commodity exposures, and do not include currency or interest rate exposures. (5) Source: Alma Capital. Seeks to capture the full market value or 'market exposure' of positions decomposed by asset class, with the exception of Interest Rate Exposure which is expressed in U.S. 10yr Equivalent terms. For equity, credit and commodity instruments this is the market value of the position or underlying position in the case of derivatives, delta-adjusted in the case of options. In the case of Credit Default Swaps the notional quantity is used, and for convertible bonds the market value is considered Credit Exposure in addition to Equity Exposure derived from the delta-adjusted Equity Exposure from embedded options. Foreign Currency Exposure seeks to capture the inherent currency risk determined at instrument level. For cash securities this is normally the market value, however for 'financed exposures' via derivatives this may equal the mark-to-market as appropriate. Foreign Currency Exposure includes all currencies except USD, and captures cash holdings and the notional legs of foreign exchange transactions.
