

Alma Platinum Quantica Managed Futures Focus

Fund Assets under Management: \$87,540,768

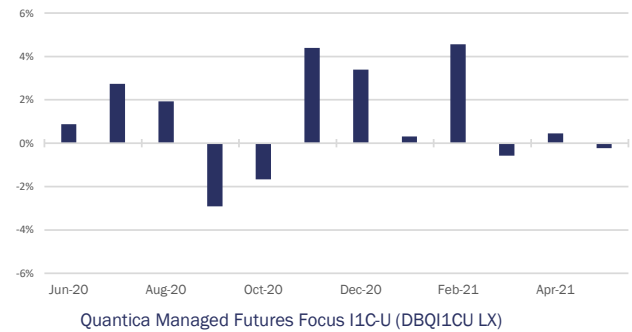

Investment Strategy

Alma Platinum Quantica Managed Futures Focus (the "Fund") is an open-ended UCITS compliant fund with Quantica Capital AG ("Quantica") acting as Investment Manager. The Investment Strategy intends to gain exposure to global exchange-traded futures markets on equity indices, bonds, interest rates and currencies, all in accordance with Quantica's proprietary systematic investment strategy. It aims to detect and take advantage of medium-term trend-following market inefficiencies in the financial futures markets (excluding commodity markets). It has low long-term correlation to traditional asset classes and offers diversification to both traditional and non-traditional investment portfolios. The Fund is highly style-consistent and follows a robust approach.

Commentary - Quantica Capital AG - May 2021⁽²⁾

The Quantica Managed Futures Program returned -0.22% in May 2021, bringing its year-to-date net performance to 4.50%.

This month's performance was yet again driven by the QMF Program's exposure to the reflatory trade. Short positions in government bond futures translated into a negative contribution of 0.8% for May, while the Program's FX exposures contributed positively with 1.2%. The continued weakening of the US Dollar throughout May allowed the Program to benefit from all its long FX futures positions. Equities contributed a negative 0.8% this month, driven predominantly by the QMF Program's Asian market exposure.

The trends observed over the first months of this year continued in May. There was hardly a day when they got challenged. This was mostly to the benefit of the QMF Program, whose risk allocation remained stable and trading activity low. Worth noting, though, is a further increase of the QMF Program's short exposure to government bonds: It stands at -257% (10-year duration equivalent) by the end of May, marking yet another all-time high, having stood at -238% a month ago. Net exposures to FX and equities remained fairly stable, with the latter having turned slightly short again mid-month.

In terms of VaR (1day, 99%), the portfolio remains concentrated in fixed income (short, 1.2%) and FX (0.7%). The fact that the QMF Program has hardly any exposure to equities these days (0.2%) shows just how flexible the approach is to deploying risk to wherever the strongest trends lie.

Fund Performance Summary⁽³⁾

	Return (%)			Annualised Return (%)			Risk Profile
