# Alma Platinum Quantica Managed Futures

Fund Assets under Management: \$159,879,390

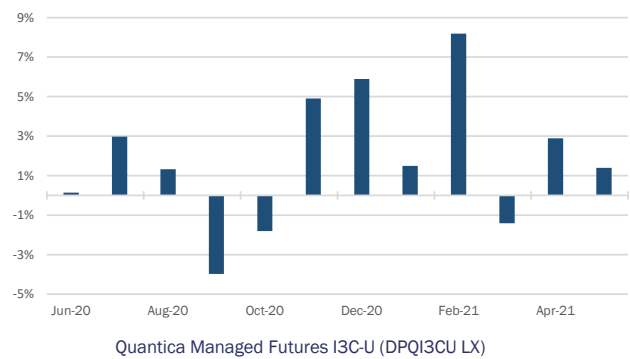

## Investment Strategy

Alma Platinum Quantica Managed Futures (the "Fund") is an open-ended UCITS compliant fund with Quantica Capital AG ("Quantica") acting as Investment Manager. The Investment Strategy intends to gain exposure to global exchange-traded futures markets (equity indices, bonds, interest rates, currencies and commodities), all in accordance with Quantica's proprietary systematic investment strategy. It aims to detect and take advantage of medium-term trend-following market inefficiencies in the futures markets. It has low long-term correlation to traditional asset classes and offers diversification to both traditional and non-traditional investment portfolios. The Fund is highly style-consistent and follows a robust approach.

## Commentary - Quantica Capital AG - May 2021<sup>(2)</sup>

The Quantica Managed Futures Program returned 1.39% in May 2021, bringing its year-to-date net performance to 12.95%.

This month's performance was yet again driven by the QMF Program's exposure to the reflationary trade. Short positions in government bond futures translated into a negative contribution of 0.7% for May, while the Program's commodity and FX exposures contributed positively with 1.4% and 1.0%, respectively. Strongest performance drivers on the commodity side were the energy sector (heating oil and crude) and copper. The continued weakening of the US Dollar throughout May allowed the Program to benefit from all its long FX futures positions. Equities contributed a negative 0.6% this month, driven predominantly by the QMF Program's Asian market exposure (long FTSE Taiwan, the Program's largest equity position as of the end of May, and short Nikkei and H-Share indices).

The trends observed over the first months of this year continued in May. There was hardly a day when they got challenged. This was to the benefit of the QMF Program, whose risk allocation remained stable and trading activity low. Worth noting, though, is a further increase of the QMF Program's short exposure to government bonds: It stands at -219% (10-year duration equivalent) by the end of May, marking yet another all-time high, having stood at -214% a month ago. Net exposures to FX, commodities and equities remained fairly stable, with the latter having turned slightly short again mid-month.

In terms of VaR (1day, 99%), the portfolio remains concentrated in fixed income (short, 1.0%), commodities (long, 1.0%, with a majority in energy) and FX (0.6%). The fact that the QMF Program has hardly any exposure to equities these days (0.2%) shows just how flexible the approach is to deploying risk to wherever the strongest trends lie.
