Alma Platinum Quantica Managed Futures

Fund Assets under Management: \$136,995,373

Investment Strategy

Alma Platinum Quantica Managed Futures (the "Fund") is an open-ended UCITS compliant fund with Quantica Capital AG ("Quantica") acting as Investment Manager. The Investment Strategy intends to gain exposure to global exchange-traded futures markets (equity indices, bonds, interest rates, currencies and commodities) and FX Forwards, all in accordance with Quantica's proprietary systematic investment strategy. It aims to detect and take advantage of medium-term trend-following market inefficiencies in the futures markets. It has low long-term correlation to traditional asset classes and offers diversification to both traditional and non-traditional investment portfolios. The Fund is highly style-consistent and follows a robust approach.

Performance History (21.10.15 - 30.09.2020)

Monthly Return Last 12 Months

Key Benefits

- The Fund provides access to a UCITS-compliant version of Quantica's flagship managed futures program ("Quantica Managed Futures Program")(2)
- The Quantica Managed Futures Program has a track record of more than 15 years and has generated a net annualized rate of return of 7.2% with a realized volatility of 10.4% p.a.(3)
- The program follows a fully systematic trend-following approach and aims to deliver a positive long-term rate of return with a low long-term correlation to traditional asset classes such as stocks and bonds.
- It trades the most liquid futures contracts
- The proprietary model has the flexibility to hold both long positions to benefit from rising prices, and short positions to benefit from price declines.
- One month rolling currency hedges are effected for share classes not denominated in USD to protect against fluctuations of exchange rate(4)
- The Fund complies with the UCITS restrictions for diversification and risk-spreading and offers daily liquidity.

Key Risks

- The Fund may enter into one or more derivatives with a number of swap counterparties. If any of the counterparties fail to make payments (for example, it becomes insolvent) this may result in your investment suffering a loss. The derivatives traded are the most liquid exchange traded futures contracts only.
- The Fund is complex and based on a CTA trading strategy which uses derivatives to take long or short positions on various markets. The use of derivatives involve a high level of risk as derivatives can be highly leveraged, highly volatile and may magnify losses.
- The Fund provides exposure to commodities. Commodity prices react, among other things, to economic factors such as changing supply and demand relationships, weather conditions and other natural events, the agricultural, trade, fiscal, monetary, and other policies of governments and other unforeseeable events all of which may affect your investment.
- Movements in exchange rates can impact the value of your investment. If the currency of your country of origin is different from the currency in which the underlying investments of the Fund are made (USD), the value of your investment may increase or decrease subject to movements in exchange rates.
- The Fund has been designed for investors who are looking for long term capital growth through exposure to alternative investment strategies. As the Fund may therefore employ complex strategies (including the use of derivatives), it is intended only for knowledgeable and experienced investors who are able to understand and evaluate both the investment strategy and its inherent risks (such understanding and evaluation may be gained through advice from a professional advisor).
- The value of an investment in the Fund may go down as well as up and can result in losses, up to and including a total loss of the amount initially invested.

Commentary - Quantica Capital AG - August 2020⁽¹³⁾

The Quantica Managed Futures Program (R1C-E) returned -4.27% for the month, bringing the annual net performance to -5.39%.

This month's return is attributable to a pronounced reversal in two of the significant trends observed this year so far - positive equity market momentum and US Dollar weakening -, that represented more than 2/3 of QMF's overall risk allocation at the beginning of September.

After surging to new all time highs, equity markets had their uptrend broken at the end of August and have lost additional ground in September. The equity market pullback and associated increase in volatility led to a reduction in QMF's net exposure from 50% to 30% at the end of September and a -1.3% negative contribution to overall performance.

The strengthening of the US Dollar during the month adversely impacted on the one hand the Program's net long positions in the Euro and the Australian Dollar within the FX book, and on the other hand its net long positions in Gold, Silver and Copper. The short-dollar trade reversal had an aggregate negative contribution of -2.7% to QMF's September performance.

The Program's risk allocation to the rates complex remains very low. Still it has contributed positively, driven by the Program's largest long position in the space, Italian government bonds, balanced by short exposures in the 10yr JGB and the German Bund.

Other positive contributors for the month originated from the commodity space with a long position in soybeans and short positions in natural gas and heating oil.

At the end of September QMF's main risk allocation remains split between US Equities, Metals and FX, with estimated portfolio volatility standing at 10.8%.
