OBJECTIVES & INVESTMENT POLICY

This Fund is actively managed and aims to maximise capital growth. The Fund invests mainly in **international convertible bonds**. A convertible bond can be converted, at the holder's option, into common stock of the issuing company, at an agreed-upon price.

Therefore, convertible bonds are "hybrid" securities that possess both fixed income and common stock characteristics. The Fund can invest in all types of convertible bonds.

The Fund is actively managed which means that the Investment Manager is actively making investment decisions for the Fund. The Fund is not managed in reference to a benchmark.

Zazove Associates, LLC manages the portfolio of this Fund.

All income in the Fund is reinvested.

investors can buy and sell shares of the Fund on a daily basis.

The **first investment** must amount to **at least** 250,000.00 Euros.

RISK AND REWARD PROFILE

The above indicator (Synthetic Risk and Reward Indicator) reflects the historical level of risk and reward of this share class over the last 5 years. As it is based on its historical behaviour, **it does not necessarily reflect future risk, nor reward**.

This share class is classified as above since convertible bonds tend to be subject to higher price fluctuations and credit risk.

This classification is solely valid as of the date of this document; it can change in the future.

Investors investing in a fund in the category "1" above may sustain a loss. A fund in this category is not risk free at all times.

The Fund does not provide investors with any guarantee of performance nor of the value of investments in it. The latter may consequently go up, as well as down.

The indicator captures the impacts on the Fund of movements in financial markets and currencies, **under normal market conditions**.

Risks materially relevant to the Fund which are not captured by the indicator:

Credit risk: the Fund invests in convertible bonds. There is a risk that the issuer may default. The likelihood of this happening will depend on the credit-worthiness of the issuer.

Currency risk: there is a risk of loss arising from exchange-rate fluctuations or exchange control regulations.

Emerging market fixed income risk: emerging economies typically exhibit higher levels of investment risk. Markets are not always well regulated or efficient and investments can be affected by reduced liquidity, a measure of how easily an investment can be converted to cash without a loss of capital, and a higher risk of debt securities failing to meet their repayment obligations, known as default.

Interest rate risk: an increase in interest rates may cause the value of securities held by the Fund to decline. Bonds prices and interest rates have an inverse relationship, when the interest rates rise, the price of existing bonds falls.

Liquidity risk: in case of low trading volume on financial markets, any buy or sell trade on these markets may lead to important market variations/fluctuations that may impact portfolio valuation.

Operational risk: the Fund is subject to the risk of material losses resulting from human error or system failures or incorrect valuation of the underlying securities.

Selection risk: the Investment Manager's judgment about the attractiveness, value and potential appreciation of a particular company's security could be incorrect.

More details on the risks investors may be exposed to when investing in this Fund are described in the "Risk Factors" section and the relevant Special Section of the Prospectus.
