Fund Information

The objective of the InRIS CFM Diversified Fund (the "Fund") is to achieve long-term capital appreciation through trading strategies that seek to have a return profile different from that of traditional asset classes, such as stocks and bonds. The Trading Advisor is free to choose how the assets of the Fund are invested within the limits of its investment policy and will utilize (typically with equal allocation) a series of four systematic trading models (the Long-Term Trend Following, Universal Value, Risk Premia and Market Neutral Equity models), which are part of its CFM Institutional Systematic Diversified Program (the "Program"). The Fund will significantly invest in financial derivative instruments ("FDIs") for investment, efficient portfolio management and hedging purposes at any one time. The Trading Advisor will primarily trade to gain exposure to a diversified portfolio of global fixed income securities (including government bonds and notes), global interest rates, global currencies, global equities, global stock indices and global credit. For hedging purposes, the Fund may use FDIs to hedge against fluctuations in the relative values of its portfolio positions due to changes in currency exchange rates and market interest rates and to hedge against the currency exposure between the denominated currency of the Class and the Base Currency of the Fund.

Portfolio Comments

The performance of the InRIS CFM Diversified Class I GBP HDG was 0.47% in September. The Fund is at -19.51% YTD.

TRENDS: +0.05%

The Long Term Trend Following program ended flat. Performance amongst asset classes was mostly negative or flat, with the exception of Interest Rates and FX, which delivered positive returns. At month-end, the program maintains its net long Bond, Short Term Interest Rate, and US dollar position. Long exposure in Equity and Credit Indices is also maintained.

Equity & Credit Indices

Global equity markets sold-off this month, with no major bourses spared. The strategy's net long exposure to Equity Indices consequently realised negative returns. The S&P 500 total return index posted a -3.8% decline, dragged down mostly by Technology and related sectors. Reflective of the tech-stock decline, the Nasdaq Total Return Index slipped - 5.7%, with the majority of losses registered in the first week-and-a-half, the sell-off trigger seemingly by investors' having become too worried about stretched valuations and gloomier economic outlook. The strategy's long position in the mini-Nasdaq was consequently the worst performer this month. A short position in the IBEX Index was, however, the best performer. The Spanish benchmark underperformed its regional peers and lost 3.6% (in euro terms), trailing the European Stoxx 600 by nearly 2%. A net long exposure in Credit Indices ended slightly worse than flat, tracking lower along with the equity pull-back.

Interest rates

Aggregate net long exposure in Bonds contributed positively. Global benchmark yields of most G7 economies slipped as investors shifted to quality fixed income assets amidst the equity market rout. Yields on the US curve, however, moved mostly sideways, but with a slight steepening. Long positions in the Australian 3-year delivered the most positive return, the yield of which fell 10 basis points as bonds rallied amid growing expectations of further monetary policy by the Reserve Bank of Australia. Long exposure to the Italian 10-year bond also realised good returns, the yield of which fell 31 basis points - its largest monthly decline since January 2020 and approaching its record low. Yields fell on lower inflation expectations, and a diminished risk of early elections. However, a short position in the German Bund was the worst performer. Investors seeking out safe havens, expecting lower inflation, and European policymakers appearing increasingly divided about its crisis response, pushed German 10-year yields fell as low as -0.545%. At month-end, the Bund shed 13 basis points and reached a nearly two-month low. Net long positioning in Short Term Interest Rates (STIRS) registered marginal gains, as most global short rates moved either sideways or slightly lower. Long exposure in the 3-month Short Sterling fared best - the contract, based on the 3-month Libor rate, gained as the reference Libor rate declined ~3%, with traders keep pricing in lower future rates.

FX

FX was slightly better than flat, with net long dollar exposure in the strategy benefitting from the greenback having gained nearly 2% during the month - breaking a five-month string of consecutive negative performance. A short position in the Singapore performed best. The US dollar gained slightly more than 0.3% against the SGD this month. A long Swiss franc, however, realised the most negative returns. The franc declined against most peers following stronger than expected dovish rhetoric from the Swiss National Bank (SNB) during its latest decision stating its readiness to intervene in the market to devalue the franc. The franc ended the month 1.9% lower against the greenback.

SHORT TERM TREND FOLLOWING: +0.02%

The Short Term Trend sleeve delivered slightly better than flat returns. Bonds were responsible for the majority of the gains, as long exposure in this asset class boosted returns as sovereign bonds enjoyed strong bids. Long exposure in the US 10-year fared best.

EQUITY MARKET NEUTRAL: +0.82%

The recent surge in rallying technology stocks, partly responsible for supporting US equity markets, stuttered. Along with a sinking outlook for the US and global economy, global equity markets sank, with defensive sectors outperforming. In the US, the Utility sector fared best, with the Energy sector trailing. The Equity Market Neutral portfolio registered positive returns with all three main clusters ending either flat or better. Across the entire book, the Technology sector fared best - supported by outperformance from long exposures in a handful of idiosyncratic rallies. Meanwhile the Energy sector fared worst.

RISK PREMIA: +0.32%

Universal Carry

The Universal Carry strategy delivered positive returns, with the majority of asset classes delivering mostly flat or better performance. At month-end, the strategy retains its net long Bonds and Short Term Interest Rates position. The strategy also maintains its net long Credit and Equity Indices exposure. Meanwhile, the dollar position has moved from a net long, to net short position. The strategy's net long Bond exposure fared best, notably long exposure on the Korean curve, especially on the Korean 3-year, as Korean bonds yields fell in unison with most major developed economies. A short position in the Buxl, however, dragged on performance - the German 5-year having fallen 8 basis points by month-end. However, long exposure to Equity Indices dragged on overall performance in this strategy, as global stocks fell. Long exposure to the Hang Seng was the worst performing position, the index crashing 6.8% in USD terms, with some key constituents, especially HSBC Holdings (slumping to its lowest level in more than a decade), dragging on the overall index.

Short Volatility

The Short Volatility strategy delivered positive returns. Delta hedged options in all asset classes made modest gains. Implied volatility in equity markets moved largely sideways, bar a brief spike during the first week tech slump. Implied volatility has remained elevated, especially for those periods just before and after the US elections, as the VIX volatility curve has moved into a distinct concave-shape. While delta hedged options on most equity indices performed modestly, it was on the Eurostoxx that they performed best. A similar pattern was observed in FX. Delta hedged options in FX delivered slightly better than flat returns, with 1-month at-the-money implied volatility on most currency pairs moving sideways. The exception being a slight pick-up mid-month when investors sought out Japanese yen as a safe-haven trade, with implied volatility on the yen-dollar pair that ticked-up slightly.

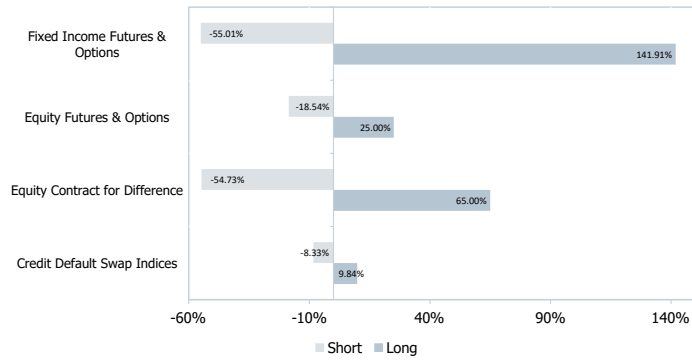

UNIVERSAL VALUE: -0.53%

The Universal Value strategy ended in negative territory. Going into the new month, the strategy maintains its net short Bonds, Credit Indices, as well as net short dollar position. A long position in Short Term Interest Rates is maintained, while the Equity Indices position is slightly short. Net short Equity Indices exposure delivered positive returns in September as global stocks sank. A short position in the mini-Nasdaq was the best performer, as the tech index fell from recent highs. The biggest losses were, however, booked in the Interest Rates asset class. A net short exposure in Bonds dragged most as global yields rose, with a short position in the Buxl the worst.

InRIS UCITS PLC and its Funds are not available for sale in the U.S. or to U.S. persons and product information concerning InRIS UCITS PLC and its Funds should not be published in the U.S. Any financial operation contains a variety of risks and factors to consider. This document does not purport to describe all the risks associated with financial transactions. Before entering into an investment, it is recommended to carefully examine all conditions, assess the risks and determine whether it is appropriate for your financial needs and objectives in all respects. It is also recommended you consult your financial, legal and/or tax advisors before entering into an investment. Past performance may not be a reliable guide to future performance. The value of investments and any income from them can fall as well as rise. You may not get back the amount you invested. Fund performance is calculated by the administrator by using the daily net asset value ("NAV") of Funds of InRIS UCITS PLC. The NAV per share is calculated by subtracting the liabilities from the assets of the relevant Fund and then dividing the difference by the number of shares issued. These net of fees returns are calculated net of all fees including management fees, transaction costs and performance fees. Returns are calculated net of all withholding taxes on foreign dividends, legal fees, custody fees, administrative fees and operating expenses. Results reflect the reinvestment of dividends, capital gain, and other earnings when appropriate. Accruals for fixed income and equity securities are included in calculations. This document is not contractual and has been prepared for information purposes only. It does not constitute an offer to sell or an investment recommendation. Potential investment should be made only after consulting the prospectus and/or the KIID of the Fund. The benchmarks presented herein have not been selected to represent appropriate benchmarks for the purpose of comparison to the Fund's performance, but rather are disclosed to allow the comparison of the Fund's performance to that of certain well-known and widely recognized benchmarks. The benchmarks' volatility and risk profile may be materially different from the Fund's volatility and risk profile. In addition, the Fund's components differ significantly from the benchmarks' components. The indices' values are obtained from Bloomberg. Prospective investors should carefully consider these limitations when evaluating the performance in comparison to benchmark data provided herein. Annualized figures are calculated by geometrically linking the respective monthly return/value.

Information for Swiss investors

The funds distributed by Rothschild & Co Bank AG (hereinafter the "Funds") presented in this document are companies under Irish law; they are authorised by FINMA for distribution to non-qualified investors in or from Switzerland. This fact sheet is not an invitation to subscribe to any of the Funds described herein; it does not replace the Fund's prospectus and is provided for information purposes only. This presentation does not constitute advice or a recommendation to subscribe to any Fund. Subscriptions shall be accepted, and shares or units shall be issued, only on the basis of the current version of the respective Fund's prospectus, as approved by FINMA. Any information imparted by this document is provided for information purposes only and has no contractual value. Past performance is not an indication of future performance. Furthermore, the commission levied for the issue and redemption of shares or units in the respective Fund shall be charged in addition. Rothschild & Co Bank AG makes no guarantee whatsoever in respect of trends in performance and may not be held liable for any decision taken on the basis of the information contained in this document. Investing in one or more shares or units of a Fund involves risk. Rothschild & Co Bank AG recommends that subscribers request additional information, particularly with regard to the capacity of the Funds' characteristics to meet their needs, by calling either the Funds' representative in Switzerland, as specified above, their usual financial advisor or Rothschild & Co Bank AG before deciding to invest. Rothschild & Co Bank AG, (Zollikerstrasse 181 - CH-8034 Zurich - Switzerland) has been authorised by FINMA to distribute the Funds to non-qualified investors in or from Switzerland; the fund has appointed Rothschild & Co Bank AG, Zollikerstrasse 181, 8034-Zurich, Switzerland to be its representative in Switzerland (the "Representative"). The paying agent in Switzerland is Rothschild & Co Bank AG, Zollikerstrasse 181, 8034-Zurich, Switzerland. The Fund's Regulations or Articles of Association, Prospectus, Key Investor Information Documents and Annual and Semi-Annual Reports for Switzerland may be obtained free of charge from the Representative in Switzerland. Investors must familiarise themselves with the prospectuses before subscribing to the shares or units of any Fund whatsoever. Announcements intended for investors in Switzerland concerning Rothschild & Co Bank AG or the Funds will be published on the electronic platform www.fundinfo.com, which is authoritative. The issue and redemption prices, or the net asset values marked "exclusive of commission", will be published every day on the electronic platform www.fundinfo.com.

Information for investors in Singapore

The Fund, which is the subject of this document, does not relate to a collective investment scheme which is authorised under section 286 of the Securities and Futures Act, Chapter 289 of Singapore (the "SFA") or recognised under Section 287 of the SFA. This document has not been registered as a prospectus with the MAS. Accordingly, this document and any other document or material in connection with the offer or sale, or invitation for subscription or purchase, of units in the Fund may not be circulated or distributed, nor may units be offered or sold, or be made the subject of an invitation for subscription or purchase, whether directly or indirectly, to persons in Singapore other than (i) to an institutional investor under section 304 of the SFA (ii) to a relevant person pursuant to section 305(1) of the SFA, or any person pursuant to Section 305(2) of the SFA, and such distribution is in accordance with the conditions specified in section 305 of the SFA; or (iii) otherwise pursuant to, and in accordance with the conditions of, any other applicable provision of the SFA. In particular, for investment funds that are not authorized or recognized by the MAS, units in such funds are not allowed to be offered to the retail public. This document and any other document or material issued in connection with the offer or sale is not a prospectus as defined in the SFA. Accordingly, statutory liability under the SFA in relation to the content of prospectuses does not apply, and investors should consider carefully whether the investment is suitable for them.
