ALMA CAPITAL

Investment Strategy

- Fundamental long/short equity strategy, with a 20-year track record, focused on the transition of energy consumption towards lower carbon intensity solutions
- Electron allocates capital globally to clean energy, infrastructure and utility companies, which serve as key drivers, enablers, and beneficiaries of major structural changes affecting the world
- Electron seeks to maximize returns using an industry knowledge approach to predict inflection points for companies within the Energy Transition

Commentary - Electron Capital Partners ⁽⁹⁾

The Fund was positive in September, outperforming the MSCI World Utilities, MSCI All Country World, and S&P 500 Indices.

Equity markets extended their positive momentum in September, supported by the Federal Reserve's decision to reinstate its rate-cutting cycle with a 25bp reduction and the prospect of two additional cuts in Q4. Earnings resilience across sectors further bolstered investor confidence, reinforcing the growth narrative. However, the sharp run-up in growth company valuations, coupled with persistent geopolitical and political uncertainty, leaves the market vulnerable. These factors create a fragile backdrop that investors are monitoring closely as they assess the durability of the rally.

Notable contributors in September included long positions in EoS Energy, Amperex Tech, Mastec, Siemens Energy, and Xcel Energy. Notable detractors included long positions in Boeing, Plug Power, Air Products, United Airlines, and Zebra Tech.

While volatility is expected to continue in the coming months – driven by lingering uncertainty around tariffs, fiscal policy, and business sentiment – we remain constructive on companies at the forefront of the energy transition and those providing the infrastructure necessary to support growing electricity demand. Encouragingly, we're beginning to see early signs of a sentiment shift, as the market starts to acknowledge the strong fundamentals, consistent execution, solid guidance, and long-term growth drivers that underpin these businesses. Our core thesis and optimism around rising power demand, with utilities/power producers and infrastructure companies as key beneficiaries, remains unchanged.

- **Significant Growth in Power Demand & Electrification** – AI/data centers, onshoring/nearshoring manufacturing supply chain, increasing renewable energy penetration, heat pump installations, EV penetration, etc.
- **Economic Viability and Security of Clean Energy** – Cheapest form of new energy generation without subsidies.
- **Interest Rate Environment** – Fed resumed rate cuts in September (25bps) with potential for two additional later this year.
- **Public Policy Support** – Greater certainty around the restructured clean energy incentives in the One Big Beautiful Bill (OBBB).

Markets are always uncertain, but we seek to generate alpha for our investors with the same persistence as we have throughout our 20-year history.

What are the Risks?

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested. The Fund is subject to the following risks which are materially relevant: Liquidity risk: the risk that arises when adverse market conditions affect the ability to sell assets when necessary. Such risk may be triggered by (but not limited to) unexpected events such as environmental disasters or pandemics. Reduced liquidity may have a negative impact on the price of the assets. Concentration risk: the risk that arises when a fund invests in relatively few holdings, few sectors or a restricted geographic area. Performance may be more volatile than a fund with a greater number of securities. Counterparty risk: the risk of failure of financial institutions or agents (when serving as a counterparty to financial contracts) to perform their obligations, whether due to insolvency, bankruptcy or other causes. Hedged Strategies risk: Hedged strategies that are designed to capture value in a non-directional market, may involve exposure to some second order risk of the market, such as the implied volatility in convertible bonds or warrants, the yield spread between similar term government bonds, or the price spread between different classes of stock for the same underlying firm. Such strategies may recognise substantial losses even on "hedge" or "arbitrage" positions. Equity risk: prices of equities may be affected by factors such as economic, political, market, and issuer-specific changes. Such changes may adversely affect the value of the equities regardless of company-specific performance. Derivative Instruments risk: the risk of loss in an instrument where a small change in the value of the underlying investment may have a larger impact on the value of such instrument. Derivatives may involve additional liquidity, credit and counterparty risks. Complete information on the risks of investing in the Fund are set out in the Fund's prospectus.
